

# MARINE POLLUTION SURVEILLANCE REPORT

Analysis Provided by: The National Oceanic and  
Atmospheric Administration/National Environmental  
Satellite, Data and Information Service (NOAA/NESDIS)

REPORT DATE: JULY 2, 2011  
REPORT TIME: 1215Z (0415Z AKDT)  
ANALYST: MYRGA

DATA SOURCE: ENVISAT ASAR © ESA 2011  
MODE: WIDE SWATH  
RESOLUTION: 50 METER  
IMAGE DATE/TIME: 7/02/2011 0723Z (7/01/11 2323  
AKDT)

## Legend

-  Possible Oil
-  False-Positives (not oil)
-  Suspected Point Source:  
[ 58°58'6" N / 146°43'42" W ]

## REMARKS:

An anomaly is located approximately 70 miles south of  
Montague Island, Alaska. A potential point source  
appears in the image to the east of the slick. The  
anomaly is approximately 45-50 miles in length and is  
almost uniform throughout. There are, however, a few  
breaks (lighter areas, not as much contrast with the  
surrounding ocean waters) within the line. Winds are  
light in the area.
